EEBus Test Specification Changelog

SPINE

Version V1.1.0

Cologne, 2026-09-23

Terms of use for publications of EEBus Initiative e.V.

General information
The specifications, particulars, documents, publications and other information provided by the EEBus Initiative e.V. are solely for general informational purposes. Particularly specifications that have not been submitted to national or international standardisation organisations by EEBus Initiative e.V. (such as DKE/DIN-VDE or IEC/CENELEC/ETSI) are versions that have not yet undergone complete testing and can therefore only be considered as preliminary information. Even versions that have already been published via standardisation organisations can contain errors and will undergo further improvements and updates in future.

Liability
EEBus Initiative e.V. does not assume liability or provide a guarantee for the accuracy, completeness or up-to-date status of any specifications, data, documents, publications or other information provided and particularly for the functionality of any developments based on the above.

Copyright, rights of use and exploitation
The specifications provided are protected by copyright. Parts of the specifications have been submitted to national or international standardisation organisations by EEBus Initiative e.V., such as DKE/DIN-VDE or IEC/CENELEC/ETSI, etc. Furthermore, all rights to use and/or exploit the specifications belong to the EEBus Initiative e.V., Deutz-Mülheimer-Straße 183, 51063 Cologne, Germany and can be used in accordance with the following regulations:

The use of the specifications for informational purposes is allowed. It is therefore permitted to use information evident from the contents of the specifications. In particular, the user is permitted to offer products, developments and/or services based on the specifications.

Any respective use relating to standardisation measures by the user or third parties is prohibited. In fact, the specifications may only be used by EEBus Initiative e.V. for standardisation purposes. The same applies to their use within the framework of alliances and/or cooperations that pursue the aim of determining uniform standards.

Any use not in accordance with the purpose intended by EEBus Initiative e.V. is also prohibited.

Furthermore, it is prohibited to edit, change or falsify the content of the specifications. The dissemination of the specifications in a changed, revised or falsified form is also prohibited. The same applies to the publication of extracts if they distort the literal meaning of the specifications as a whole.

It is prohibited to pass on the specifications to third parties without reference to these rights of use and exploitation.

It is also prohibited to pass on the specifications to third parties without informing them of the authorship or source.

Without the prior consent of EEBus Initiative e.V., all forms of use and exploitation not explicitly stated above are prohibited.

1 Introduction

This changelog provides a list of all changes that were made during the development of the different versions.

Copyright © 2026 EEBus Initiative e.V. All Rights Reserved.

2 V1.1

2.1 V1.1.0 (final)

2.1.1 EEBus_SPINE_TestSpecification

1. Section 2.2 "Preconditions":
    a. Added that the preconditions of a test case SHALL be established in the order in which they are listed.
    b. PRE_SPINE_NewConnectionEstablished: Clarified that the statement about the not yet queried primary NodeManagement feature refers to this point in time ("At this point, neither the DUT nor the test tool have queried …").
    c. PRE_SPINE_Scenario_LpcLpp_S1_S3: Added the acting actor for the bindings to the LoadControl and DeviceConfiguration server features ("… are established by the EG").
    d. PRE_SPINE_AddressChangeRecoveryResolved: Renamed the recovery method "persistent-auto-recover" to "persistent-auto-recovery".
2. Section 2.3 "Test case description":
    a. The field "Precondition" is now defined as a numbered list whose numbering reflects the order in which the preconditions are established. The precondition lists of all test cases in chapter 4 were changed from a bulleted to a numbered list accordingly.
3. Section 2.5.4 "Variable registry", Table 1:
    a. Removed the variable SYS.TestTool_Client_Address. It was used in PAR_writeLimitVal only, where it is now replaced by SYS.TestTool_Client_Address_LpcLpp. Both variables addressed the same client feature of the test tool, but the wording suggested that they may differ.
    b. SYS.TestTool_Shifted_Entity: Removed the fixed offset ("+ 37") from the variable description, because it contradicted the offset defined in PAR_shiftedCsEntityAddress. The offset is now defined solely in the referencing PAR_ blocks.
4. Section 2.5.7 "PAR_ blocks":
    a. PAR_notifyAck: Replaced the single explicit Element "deviceDiagnosisHeartbeatData.timestamp" by a reference to the Function "deviceDiagnosisHeartbeatData" of the active limitation Use Case at Actor Energy Guard. The explicit Element could be misread as a complete description of the message.
    b. Added the missing header line cmdClassifier = "call" to all seven PAR_ blocks that use a Function ending in "Call": PAR_bindingNm, PAR_bindingLpcLppDelete, PAR_bindingClientAToLoadControl, PAR_bindingClientAToDeviceConfiguration, PAR_subscriptionNm, PAR_deleteSubscriptionNm and PAR_fcDestE1SourceE0.
    c. PAR_writeLimitVal: Changed the addressSource from SYS.TestTool_Client_Address to SYS.TestTool_Client_Address_LpcLpp.
    d. PAR_writeLimitVal, PAR_writeLpcLppUnknownElement and PAR_writeLpcLppMissingScale: Changed the partial write requests from the selector form to the identifier form. The limitId is now carried in the data Element instead of loadControlLimitListDataSelectors.
5. Section 2.5.8 "Manufacturer declarations and Parameter Sheet (PARAM_SHEET)":
    a. PAR_addressChangeRecovery: Renamed the choice "persistent-auto-recover" to "persistent-auto-recovery".

Copyright © 2026 EEBus Initiative e.V. All Rights Reserved.

   b. PAR_lpcLpp_Test_Value1: Removed the constraint "The rightmost digit must not be a 0 (zero)." The value is neither stored nor read back by any test case, so the constraint had no effect.
6. Section 2.6 "Acceptance criteria", Table 2:
   a. Criterion 6 "RFE merge logic": Reformulated PASS and FAIL. The criterion now describes the behaviour of the DUT instead of the behaviour of the test tool’s parser.
7. Section 4.7 "Entity settings", test cases TC_SPINE_ENTITY_001 and TC_SPINE_ENTITY_002:
   a. Test step 1: Added an explicit timeout of 300s for the establishment of the new SPINE connection. The default timeout of section 2.4 applies to expected responses and incoming messages only and therefore did not cover this step.
8. Section 4.8.5, test case TC_SPINE_RTS_005:
   a. Test step 5: Removed the sentence "The DUT correctly applied the RFE merge logic (retaining the existing scale)." from the expected result. It did not match the formula below it, which compares the resulting value.
9. Editorial changes:
   a. Corrected the notation of the exponent in the NOTE below PAR_writeLpcLppMissingScale (superscript instead of "^").
   b. PAR_addressChangeRecovery: Corrected "recovery from changed remote server addresses" to "recover from changed remote server addresses".
   c. Fixed further errors.

2.1.2 EEBus_SPINE_ParameterSheet

1. Sheet "Report":
   a. Updated the referenced test specification to "EEBus_SPINE_TestSpec_V1.1.0".
2. Sheet "Test Cases":
   a. PAR_addressChangeRecovery: Renamed the choice "persistent-auto-recover" to "persistent-auto-recovery".
   b. PAR_lpcLpp_Test_Value1: Removed the constraint "rightmost digit ≠ 0", in line with the change in the test specification.
3. Sheet "Legend":
   a. Updated version and date.
